Lambplan averages for the 2022 drop (all asbvs and indexes Lambplan run 01/08/23)

Averages	BWT	PWT	PFAT	PEMD	PWEC	LMY	IMF	TCP	LEQ
150 Felix PD Rams	0.27	17.9	-0.36	3.4	-16	4.5	-0.32	158.8	155.5
2022 PD Breed	0.39	14.4	-0.54	2.2	-18	3.6	-0.53	140.7	134.8
62 Felix WS Rams	0.22	19.2	0.08	3.2	-43	4.0	-0.16	16.4	163.4
2022 WS Breed	0.31	15.9	-0.27	2.2	-25	3.4	-0.34	145.4	141.6

BWT "birthweight" – lower birthweight values will produce lighter birthweight lambs

PWT "postweaning weight" - a higher pwt value ram will produce faster growing progeny

PFAT "postweaning fat" – the more negative the value for pfat, the leaner the progeny will be

PEMD "postweaning eye muscle depth" – rams with higher values for pemd will have more muscle especially in the high value loin area and hind quarter, and better overall carcass shape.

PWEC "postweaning worm egg count" – a lower (more negative) value for pwec indicates the progeny will have lower worm egg counts and be more resistant to developing a worm burden

IMF "intra muscular fat" rams with higher (more positive) imf will have better eating quality

LMY "lean meat yield" a higher lmy asbv ram will sire higher lean meat yielding lambs

Indexes are designed to help meet different breeding objectives and programs. They are simply a guide to assist in selection, however when doing so producers must consider their own breeding objective. This will involve considering your current ewe base, the environment they are run in and the target market for their progeny. Our recommendation for trade or heavy are a basic indication of the target market a ram may suit. Rodney and Isaac are happy to discuss this at any time.

We do not recommend lamb producers using Terminal Carcass Production (**TCP**) or Lamb Eating Quality (**LEQ**) for anything more than a basic guide. Both TCP (30%) and LEQ (62%) have too much emphasis on the low accuracy traits of IMF and Shearforce. This does not mean that we are not trying to improve eating quality, rather their value to producers is overdone in the calculation of these indexes. This is despite more than 95% of our offering being in the top 20% for both indexes. We believe you can achieve a better balance of traits by looking at the asbvs.

At Felix Rams almost all the important data for these rams is collected before they are 7 months of age – reflecting what you aim to do in your prime lamb enterprise. The rams are run commercially in large management groups mainly on dryland lucerne/perennial grass pasture, so their performance is what you will see in your paddocks. What you see is what you get. Our aim is to breed sound rams to efficiently produce outstanding prime lambs.

Our commitment to accurate data collection and effective management groups and their use in estimating the breeding value of rams is second to none.

Rodney, Liz, Isaac and Val Watt

NB Ram breeders. The minimum price for a ram to be individually registered as a stud ram will be \$3000. We retain the right to collect semen for our own use at our expense from any ram individually registered.

Both our Poll Dorset and White Suffolk flocks are 5 Star for Sheep Genetics Data Quality Score.

We use a combination of young sires and well linked mature sires along with DNA testing to provide high accuracy ASBVs. Semen sales, sires in the Resource Flock, and the use of AI sires increases our linkage in the SG database and the accuracy of the ASBVs.

Catalogues with Lean Meat Yield (LMY), Intramuscular Fat (IMF) and Dressing Percentage (DRESS) on our website www.felixrams.com.au and on pen cards on sale day.
